REPORT ON INSPECTION AND ANALYSIS OF COMMERCIAL FERTILIZERS

1959

H. J. FISHER, Chief Chemist¹

CONNECTICUT LAW AND REGULATIONS REGARDING COMMERCIAL FERTILIZERS

The term "commercial fertilizers", as used in the Connecticut fertilizer statute, includes "any and every substance imported, manufactured, prepared or sold for fertilizing or manuring or soil amendment purposes, except barnyard manure and stable manure which have not been artificially treated or manipulated, marl and lime." An amendment of the law in 1949 permitted fertilizers to be labelled with guaranties of elements other than nitrogen, phosphorus and potassium, but did not change the requirement that mixed fertilizers must contain at least 0.82 per cent of nitrogen, and 1 per cent of either phosphoric acid or potash, for guaranties of these elements to be made. Phosphorus must be declared as available phosphoric acid (except in the case of bone, tankage and other natural organic materials, where total phosphoric acid is guaranteed), and potassium as water-soluble potash; all other elements must be guaranteed in terms of percentages of the elements, not as oxides or salts. A registration fee of \$10.00, payable annually, is charged for each element guaranteed in each brand of fertilizer; there is also a six-cent tonnage tax, payable semiannually.

While manufacturers usually register their own fertilizers, if a retailer sells a fertilizer manufactured by an out-of-state firm, and that firm refuses to register, under the law the retailer is responsible for registration fees and tonnage taxes. The retailer, therefore, should assure himself that the requirements of the law have been met by the manufacturers of the brands which he handles, or himself be prepared to meet all these requirements.

The law exempts from registration, and from other requirements, only: (1) fertilizers passing through the State in transit; (2) fertilizers and fertilizer materials shipped to regular fertilizer factories to be used for manufacturing purposes; and (3) fertilizers and fertilizer chemicals sold to The Connecticut Agricultural Experiment Station for experimental purposes.

¹ Analyses were made by Messrs. Sherman Squires, Werner Mueller and Walter Oliver, Miss Helen Kocaba and Miss Sunrae Agostini; inspection and sampling by Mr. R. Richard Nichols; compilations by Miss Eleanor Hopcraft.

Cottonseed, linseed, peanut and soybean oil meals, when sold or used for fertilizer purposes, must be registered as fertilizers and the specified fees paid thereon. For such products the registration fee is \$10.00 per brand. This fee and the tonnage tax are entirely apart from the registration fee required by the feeding stuffs law for vegetable meals used as feeds (there is no tonnage tax on feeds).

Because manufacturers or jobbers do not know how much, if any, of their vegetable meal tonnage is sold or used as fertilizer, local dealers and purchasers report their sales or purchases to this Station. This information is not for publication but is used to inform manufacturers of the total sales of their meal as fertilizer in this State. It is expected that the fees provided for by statute will be paid by the manufacturer or other party responsible for the brands.

Official Definitions of Fertilizer Terms and Materials

It is expected that fertilizers sold in this state will comply with the regulations and standards of the Association of American Fertilizer Control Officials. A copy of the "Official Publication" of that Association giving these definitions and regulations may be obtained from the secretary-treasurer, B. D. Cloaninger, Drawer 392, Clemson, South Carolina, for \$2.00.

REGISTRATIONS

For 1959, 111 firms and individuals registered 441 brands of fertilizer at this Station for sale in the State. As required by statute, the brands are listed as follows:

J. & L. ADIKES, INC., 182-12 93rd Ave., Jamaica 23, N. Y.

Gro-Well Bone Meal

Gro-Well Cottonseed Meal

AGRICULTURAL PRODUCTS CO., 156 Valley St., E. Providence, R. I.

Apco Kingston Lawn Food 10-6-4

Apco Kingston Lawn & Garden 5-10-5

AGRICULTURAL SUPPLY CO., 221 Richmond Ave., West Haven, Conn.

Yale Special Mixture

ALLIED CHEMICAL CORP., Nitrogen Div., P. O. Drawer 61, Hopewell, Va.

"Arcadian" A-N-L Fertilizer Compound

"Arcadian" 12-12-12 Granular Fertilizer

"Arcadian" Nitrana Solution 2

"Arcadian" Nitrana Solution 3

"Arcadian" Nitrana Solution 4

"Arcadian" Nitrate of Soda

"Arcadian" Pelleted Ammonium Nitrate

"Arcadian" Uran 30 Solution

"Arcadian" Uran 32 Solution

"Arcadian" Urea 45 Fertilizer Compound

FERTILIZER INSPECTION FOR 1958

The Connecticut fertilizer law does not provide for compulsory limitation of the grades of fertilizer that may be sold in this State. However, because all authorities are agreed that a small number of grades can take care of all the needs of agriculture, and that standardization on a few grades will promote economy in the manufacture of fertilizer and aid in keeping prices down, ever since the compulsory limitation imposed by War Food Order No. 5 of World War II was revoked (on September 30, 1945) the New England agronomists have compiled lists of recommended fertilizer ratios and minimum grades.

On October 7, 1952 the agronomists and fertilizer dealers of southern New England met at Storrs and agreed upon the following list for the 1952-1953 season:

<u>Ratio</u>	<u>Minimum Grade</u>
0-1-1	0-14-14
0-1-2	0-10-20
1-1-1	8- 8- 8
1-1-3	5- 5-15 (Tobacco fertilizer)
1-2-1	5-10- 5
1-2-2	5-10-10
2-1-2	6- 3- 6 (Tobacco fertilizer)
3-4-4	6- 8- 8
4-3-1	8- 6- 2 (For maintenance of established turf)
5-8-7	5- 8- 7

This list has not been changed up to the present time.

Prior to the 1958-1959 season more than three-fourths of the mixed fertilizers sold in this State each year were of the recommended ratios and minimum grades. This year the percentage dropped to 69. This decrease appears to be due chiefly to an increase in the consumption of high-nitrogen fertilizers containing proportionately less phosphoric acid and potash than the approved ratios call for; for example, 1,197 tons more of the four grades 6-10-4, 10-5-5, 10-6-4 and 20-10-5 were purchased in 1958-1959 than in the previous year.

During the past season the Station agent collected samples of all registered brands that could be found on the market. The total number of samples analyzed was 53 fewer than the year before, but 4,050 more tons of fertilizer were sold.

The following tabulation lists the total number of samples analyzed (both official and unofficial) of each class of fertilizer, as well as the tonnage sold in the period between July 1, 1958 and June 30, 1959 (these tonnage figures do not include fertilizer distributed under the Federal Agricultural Conservation Program):

CLASSIFICATION OF FERTILIZER MATERIALS AND
FERTILIZER TONNAGE

(Tonnage is for the period of July 1, 1958 to June 30, 1959)

	No. of Samples	Tonnage	
I. Containing chiefly nitrogen:			
Nitrate of ammonia	4	755	
Nitrate of soda	3	674	
Sulphate of ammonia	4	88	
Cyanamid	3	170	
Urea	9	1,413	
Castor pomace	4	1,238	
Cottonseed meal	72	4,338	
Horn and hoof meal	2	13	
Linseed oil meal	11	352	
Soybean oil meal	2	244	
Tankage	...	2	
Other materials	7	2	
			9,289
II. Containing chiefly phosphoric acid:			
Superphosphate 18%	1	203	
20%	14	4,194	
46%	4	342	
Precipitated bone	7	66	
Phosphate rock	1	72	
			4,877
III. Containing chiefly potash:			
Muriate of potash	8	569	
Sulphate of potash	3	123	
Sulphate of potash-magnesia	1	73	
Cotton hull ashes	6	456	
			1,221
IV. Containing nitrogen and phosphoric acid:			
Dry ground fish	18	220	
Bone meal	13	500	
Other materials	2	1,226	
			1,946
V. Containing nitrogen and potash:			
Nitrate of potash	4	116	
			116
VI. Mixed fertilizers:			
Commercial mixtures	246	55,944 ¹	
Special and home mixtures	12	6,782	
			62,726
VII. Miscellaneous:			
Borax	...	7	
Fritted trace elements	...	1	
Manganese sulphate	1	...	
Sheep and cattle manure	20	1,236	
Limestone and similar materials	4	...

Grand total 55,944

I. Materials Chiefly Valuable for Nitrogen

Analyses of the 61 official samples of nitrogenous materials are given in Table 1. Fifty-eight of these met their guaranties and three were deficient. The substandard samples included one each of nitrate of soda, sulphate of ammonia and dried blood.

II. Materials Chiefly Valuable for Phosphoric Acid

Analyses of 14 official samples of 20 per cent superphosphate, one of the 18 per cent grade, two "triple" superphosphates, three samples of precipitated bone, and one sample of phosphate rock, are given in Table 2; all samples met their guaranties.

III. Materials Chiefly Valuable for Potash

Seven official samples of muriate of potash, two of cotton hull ashes, and one each of sulphate of potash and sulphate of potash-magnesia, were analyzed as shown in Table 3. Four of the muriate of potash samples were found deficient; the other materials met their guaranties.

IV. Materials Supplying Nitrogen and Phosphoric Acid

This group consists chiefly of dry ground fish and bone meal. Guaranties of "available" phosphoric acid are not required of such natural products, and most of them guarantee only total nitrogen and total phosphoric acid. Four official samples of dryground fish, 10 of bone meal and two of "Milorganite" (a treated sewage sludge) were analyzed in 1959. Three of the bone meals were found deficient; all other samples met their guaranties. Analyses are given in Table 4.

V. Materials Supplying Nitrogen and Potash

The only fertilizer material on the Connecticut market falling in this category is nitrate of potash. Fertilizer grade potassium nitrate is required to contain at least 12 per cent of nitrogen and 44 per cent of soluble potash. Two official samples fully met their guaranties of 13 per cent nitrogen and 44 per cent potash. Analyses are given in Table 3.

VI. Mixed Fertilizers

Commercial Mixtures

Analyses of 235 official samples of mixed fertilizers are given in Table 5. Results are summarized as follows:

Total number of samples		235
Samples deficient in:		
one item	75	
two items	9	84
Percentage of samples meeting all guaranties		64
Total guaranties made ¹		679
Guaranties not met:		
nitrogen	58	
phosphoric acid	13	
potash	22	93
Percentage met		86

¹Two hundred and nine samples with three guaranties and 26 with two guaranties (guaranties of minor elements not included).

Eighty-six per cent of all guaranties for major components were substantially met or exceeded.

Twenty-six samples guaranteed magnesium (1.2 per cent in 20 cases, 0.06 per cent in four cases and 0.9 and 0.02 per cent in one case each) in addition to the major components; all samples met their guaranties, but the sample guaranteeing 0.02 per cent was found to contain 40 times the guaranty. There were nine samples declaring boron (three each 0.11 and 0.08 per cent and one each 0.34, 0.20 and 0.035 per cent), of which all except two met their guaranties. One of the samples containing magnesium and boron also bore guaranties for trace amounts of copper, zinc, manganese, iron and molybdenum; it was deficient in copper, zinc and molybdenum.

Special and Home Mixtures

Twelve samples of special and home mixtures were analyzed during the year, mostly for tobacco growers. Five years ago there were 150 such samples, but of late years there has been a steady decline - partly because the larger growers made private arrangements for testing their own mixes and partly because less tobacco has been grown.

Since the composition of these 12 samples is not of public interest their analyses are not tabulated in this bulletin.

State Purchases of Fertilizer

Fertilizer materials and mixed goods supplied to State institutions on State purchase orders are regularly included in our annual inspection. Fertilizers so supplied are not exempt from payment of registration fees and tonnage taxes unless they are furnished to this Station for experimental purposes.

Samples representing State purchases are indicated in the several tables. They are summarized as follows:

<u>Materials</u>	<u>No. of samples</u>	<u>Reference</u>
Supplying nitrogen	5	Table 1
Supplying phosphoric acid	5	Table 2
Supplying potash	3	Table 3
Supplying nitrogen and phosphoric acid	1	Table 4
Mixed fertilizers	<u>26</u>	Table 5
Total	40	

VII. Miscellaneous

Sheep and cattle manures. These products must bear guaranties of nitrogen, either total or "available" phosphoric acid, and potash. Of the 19 official samples analyzed during the 1958-1959 season 14 met all guaranties, four were deficient in nitrogen and one contained too little potash.

Limestone and similar materials. Because the legal definition of "commercial fertilizers" (G.S. 22-105) specifically excludes "marl and lime", no regular inspection of liming materials is made. Occasional samples of limestone, hydrated lime and gypsum ("land plaster") are analyzed for farmers and Federal and State agencies. Analyses of two samples of limestone and one each of gypsum and hydrated lime are given in Table 7.

Fertilizers sold in small packages. Fertilizers sold only in packages of 10 pounds or less net weight are not required to be registered. No attempt, therefore, is made to sample every one of the small package fertilizers on the market, but such brands as come to the attention of our agent are picked up and analyzed as a matter of public interest. During the 1958-1959 season 87 samples of small package fertilizers were analyzed. Seventy-four of these, or 85 per cent, met all guaranties, and 93 per cent of the total of 251 guaranties of major components were met. This is a considerably better showing than that made this year by fertilizers sold in 100 lb. bags. Analyses are given in Table 8.

Other miscellaneous materials. Twenty other miscellaneous products were examined. Analyses of 13 of these samples are given in Table 9; the other seven were not of general interest.

Check meals and fertilizers. Collaboration was continued with the various check analysis programs: Eleven soybean oil meal samples received from the American Oil Chemists' Society were analyzed for nitrogen, and the usual fertilizer determinations were made on nine check fertilizers supplied by the National Plant Food Institute.

MAINTENANCE OF GUARANTIES

The maintenance of guaranties as compiled from analyses of ingredient materials and mixed goods (Tables 1-6 and 8) is shown in the following tabulation. Deficiencies of 0.1 per cent or less in nitrogen, 0.2 per cent or less in phosphoric acid and potash, and 20 per cent of the claimed value in the case of minor elements, are not counted. The proportion of guaranties substantially met was 89 per cent.

	No. of samples	No. of guaranties	Deficiencies
Nitrate of ammonia	4	4	0
Nitrate of soda	3	3	1
Sulphate of ammonia	3	3	1
Cyanamid	3	3	0
